

RULES and Objective Firefighter game. You play as Collin the firefighter and you go around the level putting out fires and the faster you put out the fire the more score you get.

What makes Collin special is that he shoots water bullets from his handy dandy Narf gun that is physically on his body.

If you don't put out all the fires by the time the timer runs out you lose and your goal is to put out all the fires as fast as you can to get the highest score possible.

Different types of fires are worth more points but the bigger they are, the longer it takes to put them out. Small, medium, and large fires.

There are also people around the map that you can save and gain more points by doing so.

Controls: You move with the arrow keys. Left arrow to move left, right arrow to move right, up arrow to go up stairs and ladders, and spacebar to shoot water out of your gun at the fires.

You hold space to shoot the water but as you hold the space bar the water pressure increases and extinguishes the water faster.
